

Has spent the past five years preaching market about wide capabilities of AI - Computer Vision.

Has proven the potential of Computer Vision in following industries: Industrial production, Finance, Smart City, Media.

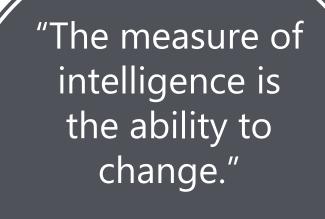

Has started as a programmer and grown to leadership positions in the leading IT companies in Latvia.

His knowledge is built on 20 years of experience in the IT custom development solutions.

Agnis Jakubovics founder and CEO of **Apply** Intelligent Technologies.

Albert Einstein

Nordic Plast Member of **C** eco baltia group

Case study

BUSINESS ISSUE

Manual product quality monitoring effects production costs and efficiency.

TASK

Achieve fully automatic real-time quality monitoring CHALLANGE

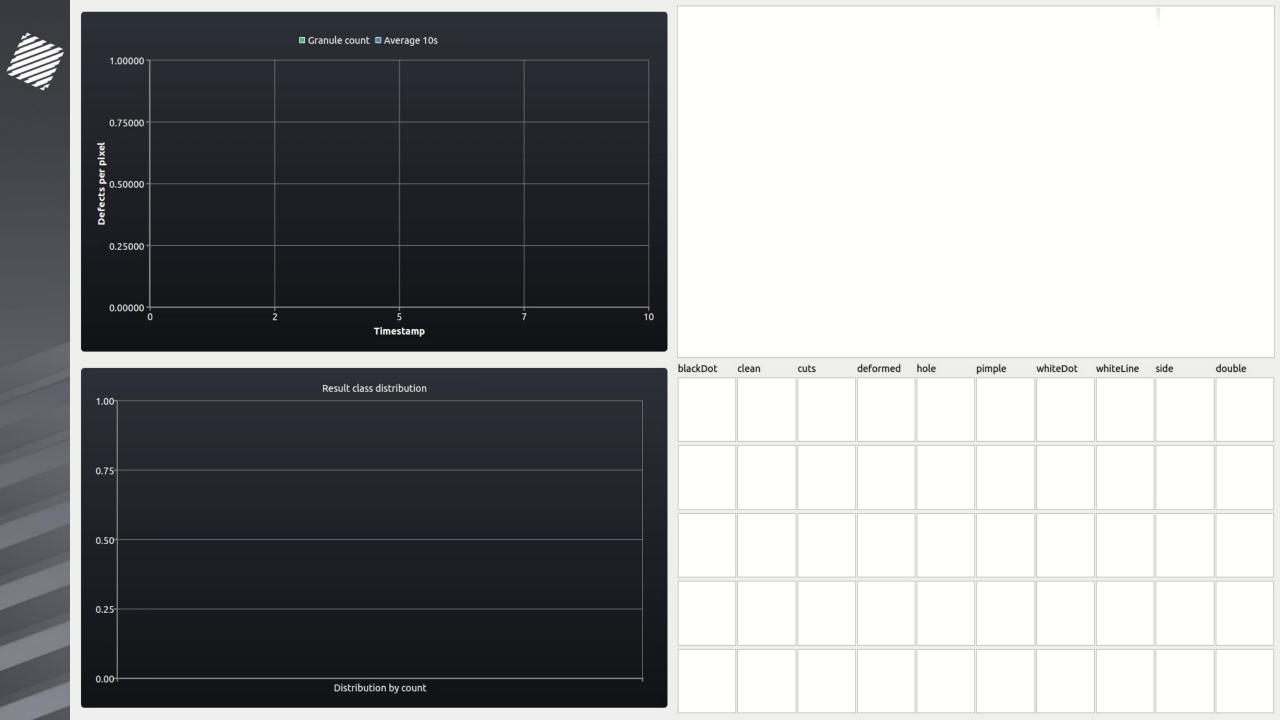

- Regranulat LDPE Grey/Black -> size – ø5mm x 3mm -> weight - 0,05g

- Production capacity ~20 000 000 granulate/h = 1T/h

- In real-time inspect 10% of the product (> 500 obj./sec) and classify found defects

What we are used to think computer vision is.

Actual computer vision using convolutional neural networks.

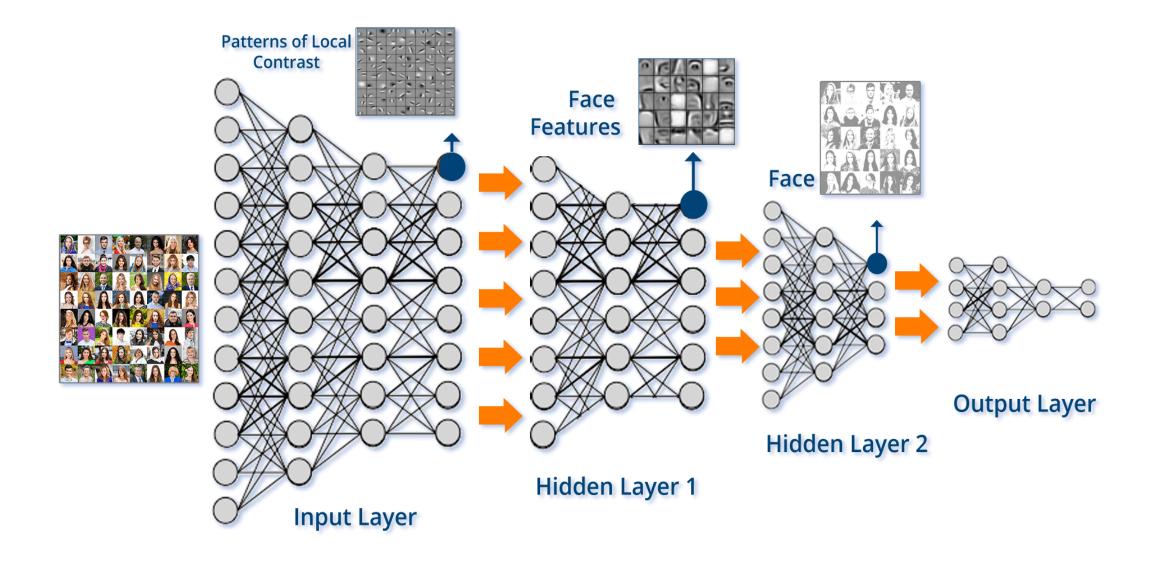

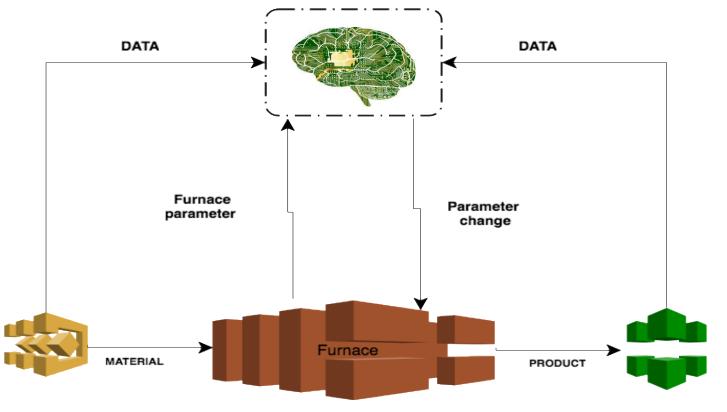

BUSINESS ISSUE

- The operator's educated guess can not be formalized and it poses a risk to the continuity of production
- Finding the best furnace parameter set take time and it affect production costs

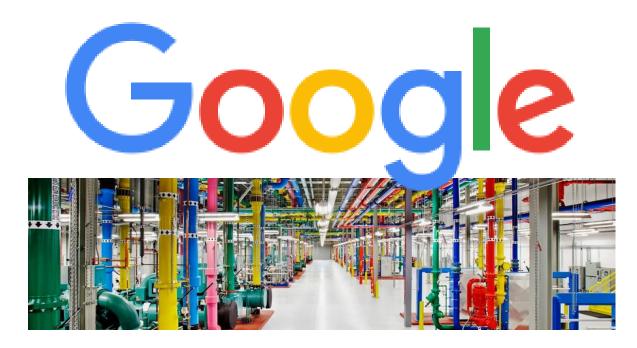

TASK

Achieve a dynamic and automatic calibration of the furnace

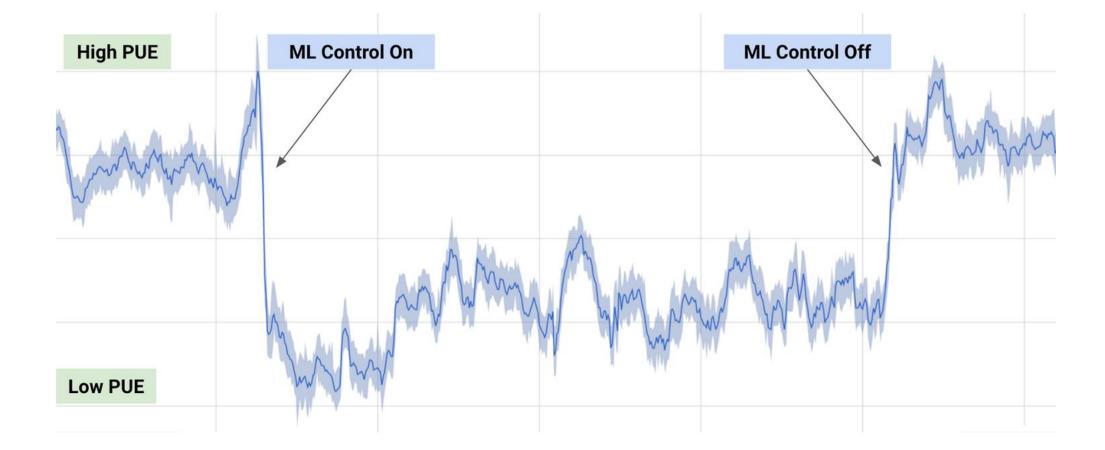

Machine Learning (ML) Application for Data Center Optimization

DIGITALIZE EDUCATED GUESS

APPLY INTELLIGENT TECHNOLOGIES

<u>www.applyit.lv</u>
